Introduction

Natural Language Processing: Use Cases

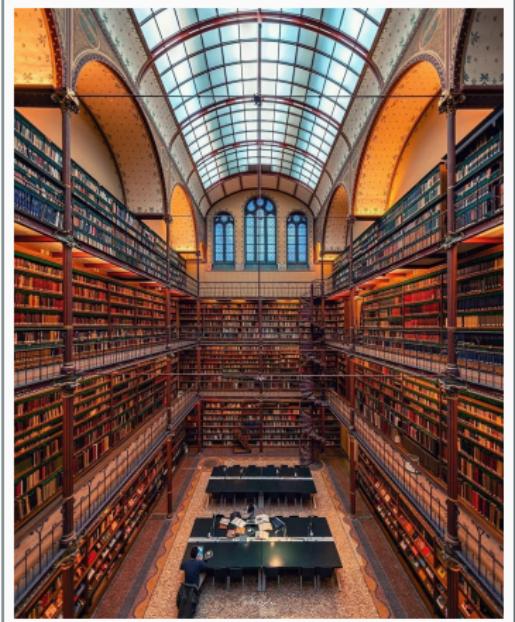

Some practical use cases for NLP:

- Text exploration (keyphrases, topic models)
- Text classification (including sentiment analysis)
- Information Extraction (unstructured → structured)

Unstructured Data

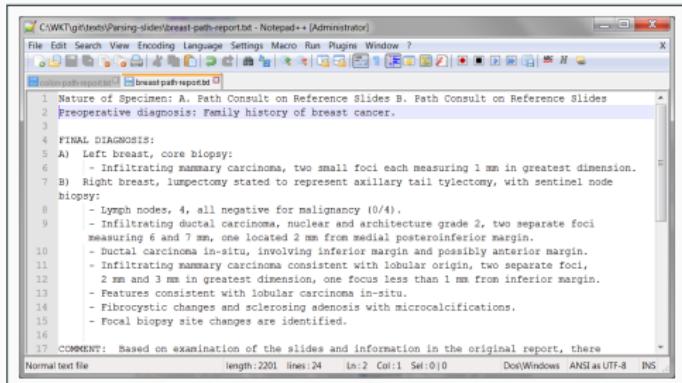

Vast quantities of information are encoded as **unstructured data**, in the form of natural language text.

But it can be hard to make this information available for computational analysis at scale.

Unstructured Data

What a **human** sees:

A screenshot of the Notepad++ application window. The title bar reads "C:\WKT\git\texts\Parsing-slides\breast-path-report.txt - Notepad++ (Administrator)". The menu bar includes File, Edit, Search, View, Encoding, Language, Settings, Macro, Run, Plugins, and Window. The toolbar has various icons for file operations. The main text area contains a medical report for breast pathology. The report starts with "Nature of Specimen: A. Path Consult on Reference Slides B. Path Consult on Reference Slides". It then describes preoperative diagnosis ("Family history of breast cancer") and final diagnosis ("Left breast, core biopsy"). The final diagnosis section details findings from both breasts, including infiltrating mammary carcinoma, ductal carcinoma in-situ, and various other features like lymph nodes and fibrotic changes. A comment at the end states "Based on examination of the slides and information in the original report, there". At the bottom of the window, status bars show "Normal text file", "length:2201 lines:2 col:1 Sel:0|0", "DotWindows", "ANSI as UTF-8", and "INS".

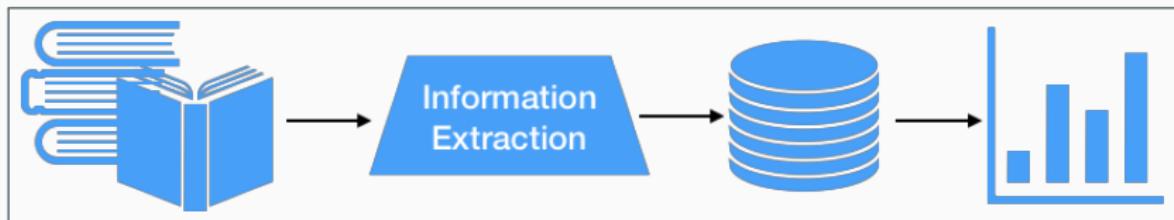

What a **computer** sees:

0	1	2	3	4	5	6	7	8	9	a	b	c	d	e	f
4e	61	74	75	72	65	20	6f	66	20	53	70	65	63	69	6d
65	6e	3a	20	41	2e	20	50	61	74	68	20	43	6f	6e	73
75	6c	74	20	6f	6e	20	52	65	66	65	72	65	6e	63	65
20	53	6c	69	64	65	73	20	42	2e	20	50	61	74	68	20
43	6f	6e	73	75	6c	74	20	6f	6e	20	52	65	66	65	72
65	6e	63	65	20	53	6c	69	64	65	73	0d	0a	0d	0a	46
49	4e	41	4c	20	44	49	41	47	4e	4f	53	49	53	3a	0d
0a	41	29	20	20	4c	65	66	74	20	62	72	65	61	73	74
2c	20	63	6f	72	65	20	62	69	6f	70	73	79	3a	0d	0a
20	20	20	20	2d	20	49	6e	66	69	6c	74	72	61	74	69
69	6e	67	20	6d	61	6d	61	72	79	20	63	61	72	63	

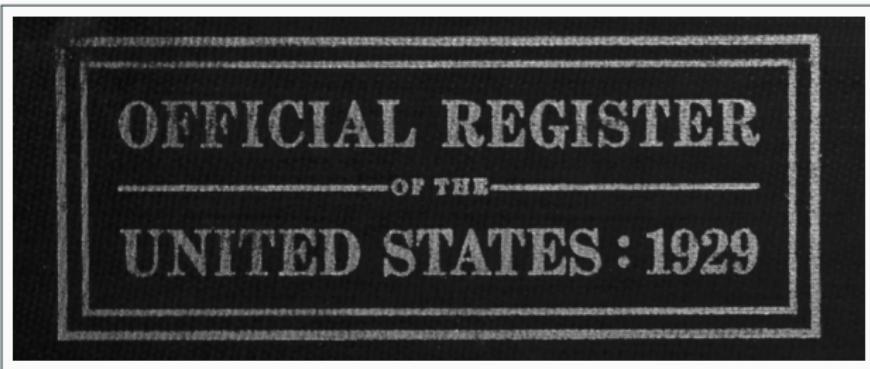

Information Extraction

Information extraction (IE) can be used to convert some of the information stored in text into **structured data**:

1. Search for relevant chunks of information in a corpus
2. Map these chunks to structured representations (potentially including relationships)
3. Store the results in structured format for downstream analysis

Example Use Case

Example Use Case

Official Register of the United States, 1929

Regular Expressions

Regular Expressions

- Regular expressions (regex) are a compact and expressive mini-language for defining patterns over text
- A regex matches a set of strings
- Regex patterns can contain:
 - Sequences: abc
 - Disjunctions: (a | b | c)
 - Repetitions: [A-Z]* , [0-9]+ , a{2,3}b+
 - Ranges: [A-Z] , [a-z] , [0-9]
 - Classes: \w , \s , .
 - Optionality: colou?rs?
 - Anchors: ^ABC[0-9]+abc\$

<http://web.stanford.edu/~jurafsky/slp3>

Finite State Machines

Python ▾ View Cheatsheet Flags ▾

```
1 ^\s?([A-Z]\.?[a-z]*)((?:\s[A-Z]\.?[a-z]*){1,3}(?:,\s*jr)?)
```

Result: Matches starting at the black triangle slider

```
1 |George H. James, jr
```

<https://jex.im/regulex>

Chomsky Hierarchy

Grammar	Languages	Automaton	Production rules (constraints)*	Examples ^[2]
Type-0	Recursively enumerable	Turing machine	$\alpha \rightarrow \beta$ (where α contains at least one non-terminal)	$L = \{w w \text{ describes a terminating Turing machine}\}$
Type-1	Context-sensitive	Linear-bounded non-deterministic Turing machine	$\alpha A\beta \rightarrow \alpha\gamma\beta$	$L = \{a^n b^n c^n n > 0\}$
Type-2	Context-free	Non-deterministic pushdown automaton	$A \rightarrow \alpha$	$L = \{a^n b^n n > 0\}$
Type-3	Regular	Finite state automaton	$A \rightarrow a$ and $A \rightarrow ab$	$L = \{a^n n \geq 0\}$

Regular Expressions \equiv Regular Languages \equiv Finite State Machines

Demo: Developing Regular Expressions

The screenshot shows the regex101.com interface. On the left, there's a sidebar with 'SAVE & SHARE' (Save Regex, 46 matches), 'FLAVOR' (PCRE (PHP), ECMAScript (JavaScript), Python, Golang), 'TOOLS' (Code Generator), and a 'SPONSOR' section for Atlassian. The main area has a 'REGULAR EXPRESSION' input field containing `\nb([0-9]{1,2}(?:d|th|st))`, which matches 46 times in the 'TEST STRING'. The test string lists names, titles, and locations, such as James K. Wallace (Superintendent of accounts and budget officer, Ohio, 1st..), Ernest E. Emerson (Purchasing agent, Md.), Edward O. Reed (Technical director, D.C.), and others. A 'SUBSTITUTION' section is at the bottom.

regular expressions [?m](#)

REGULAR EXPRESSION

`\nb([0-9]{1,2}(?:d|th|st))` 46 matches, 11053 steps (~16ms) "gm

TEST STRING

SWITCH TO UNIT TESTS ▾

TEST STRING	REGULAR EXPRESSION	RESULTS
James K. Wallace	<code>\nb([0-9]{1,2}(?:d th st))</code>	Superintendent of accounts and budget officer_ Ohio 1st..
Ernest E. Emerson		Purchasing agent
Edward O. Reed		Technical director
Burr G. Williams		Chief instructor of apprentices
Ellwood S. Moorhead		Production manager
Edward A. Huse		Night assistant production manager
Hermann B. Barnhart		Superintendent of printing

SUBSTITUTION

(For fun: <https://regexecrossword.com>)

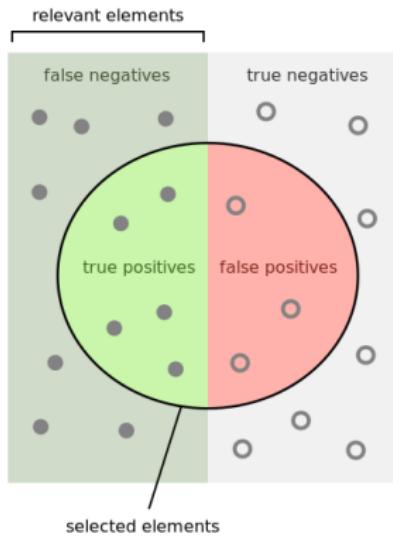

Demo: Complete Working Example

The screenshot shows a Jupyter Notebook interface with the following details:

- Launcher** tab is selected.
- extract-records.ipynb** tab is open.
- Python 3** kernel is selected.
- Cell 4:** `path = pathlib.Path.cwd() / 'excerpt-p17.txt'`
- Cell 5:** `with open(path, mode='r', encoding='utf-16-le') as fid:
 lines = [line for line in fid]
- Section Header:** "Extract Fields"
- Cell 6:** A code block defining the `Record` class. The code is as follows:

```
class Record:  
    """  
    A simple data class containing fields for each extracted line  
    """  
    def __init__(self, dept, name, title, state, dist, salary):  
        self.dept, self.name, self.title, self.state, self.dist, self.salary = \  
            dept, name, title, state, dist, salary  
    def __str__(self):  
        return f"DEPT: {self.dept}\nNAME: {self.name}\nTITLE: {self.title}\nSTATE: {self.state}\nDIST: {self.dist}"  
    def to_dict(self):  
        return {  
            'dept':self.dept,  
            'name':self.name,  
            'title':self.title,  
            'state':self.state,  
            'dist':self.dist,  
            'salary':self.salary}
```

Evaluating Performance

How many selected items are relevant?

$$\text{Precision} = \frac{\text{true positives}}{\text{true positives} + \text{false positives}}$$

How many relevant items are selected?

$$\text{Recall} = \frac{\text{true positives}}{\text{true positives} + \text{false negatives}}$$

sensitivity, recall, hit rate, or true positive rate (TPR)

$$\text{TPR} = \frac{\text{TP}}{P} = \frac{\text{TP}}{\text{TP} + \text{FN}}$$

specificity or true negative rate (TNR)

$$\text{TNR} = \frac{\text{TN}}{N} = \frac{\text{TN}}{\text{FP} + \text{TN}}$$

precision or positive predictive value (PPV)

$$\text{PPV} = \frac{\text{TP}}{\text{TP} + \text{FP}}$$

negative predictive value (NPV)

$$\text{NPV} = \frac{\text{TN}}{\text{TN} + \text{FN}}$$

false out or false positive rate (FPR)

$$\text{FPR} = \frac{\text{FP}}{N} = \frac{\text{FP}}{\text{FP} + \text{TN}} = 1 - \text{TNR}$$

false discovery rate (FDR)

$$\text{FDR} = \frac{\text{FP}}{\text{FP} + \text{TP}} = 1 - \text{PPV}$$

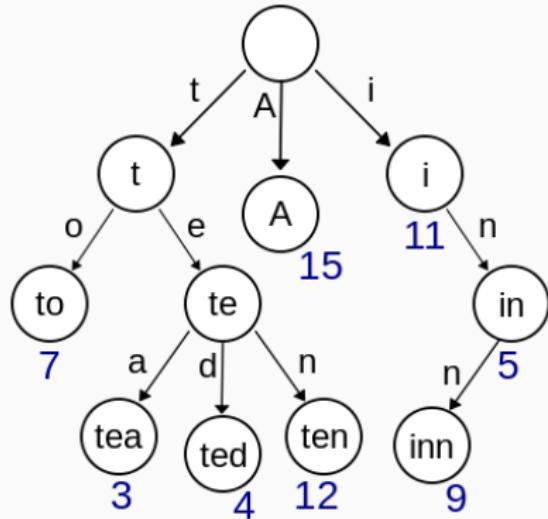

miss rate or false negative rate (FNR)

$$\text{FNR} = \frac{\text{FN}}{P} = \frac{\text{FN}}{\text{FN} + \text{TP}} = 1 - \text{TPR}$$

String Distance Algorithms

I N T E * N T I O N
| | | | | | | | |
* E X E C U T I O N

N	9	8	9	10	11	12	11	10	9	8
O	8	7	8	9	10	11	10	9	8	9
I	7	6	7	8	9	10	9	8	9	10
T	6	5	6	7	8	9	8	9	10	11
N	5	4	5	6	7	8	9	10	11	10
E	4	3	4	5	6	7	8	9	10	9
T	3	4	5	6	7	8	7	8	9	8
N	2	3	4	5	6	7	8	7	8	7
I	1	2	3	4	5	6	7	6	7	8
#	0	1	2	3	4	5	6	7	8	9
#	E	X	E	C	U	T	I	O	N	

<https://phiresky.github.io/levenshtein-demo>

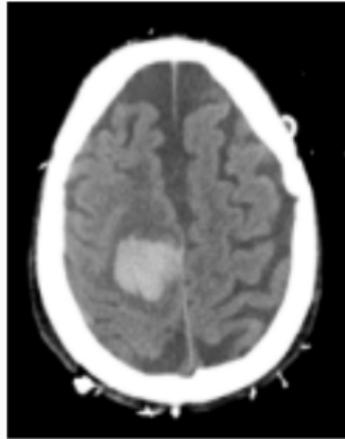

Advanced Pattern Matching

Annotation Patterns

```
def regex = new AnnotationRegex(  
    (DictMatch, [code:INVASIVE])  
    (DictMatch, [code:CANCER])  
    ( (Token, [text:/with|having/]) (0,1)  
        (DictMatch, [code:LOBULAR|DUCTAL])  
        (Token, [text:/features/]) ) (0,1)  
)
```

- Regular expressions can rapidly become very complex and difficult to modify and maintain
- Solution: annotation-level regular expressions
- Create cascades of annotations, each level at a higher level of abstraction

Example: CT Scan

FINDINGS: A 2.1 x 2.6 cm intraparenchymal hematoma is noted in the right high, posterior frontal lobe. There are smaller foci of hemorrhage noted anterior and posterior to this hematoma with another focus of hemorrhage in the right parietal lobe measuring 7 x 9 mm. The intraparenchymal hemorrhages have increased in size when compared to the outside head CT from 11/9/2015. There is associated low-attenuation surrounding the hematoma, compatible with vasogenic edema.

A more ventral region of low-attenuation is noted in the right frontal lobe (series 4, image 26), which is nonspecific and may represent an area of gliosis/encephalomalacia or small vessel ischemic disease. There is no midline shift and the basilar cisterns are preserved. There is moderate global parenchymal volume loss with corresponding size of the ventricles. Scattered areas of white matter low attenuation are compatible with small vessel ischemic disease. Left-sided lens implant is noted. The visible portions of the paranasal sinuses, as well as the mastoid air cells and middle ear cavities, are clear.

IMPRESSION: Acute intraparenchymal hemorrhages are noted in the right frontal and parietal lobes. Compared to the earliest CT from 11/9/2015 at the outside facility, there has been a mild increase in the size of these hemorrhages. There is no evidence of midline shift or basilar cistern effacement.

What factors influence use of prophylactic seizure medications in patients with intracerebral hemorrhage?

Example: CT Scan

FINDINGS: A 2.1 x 2.6 cm intraparenchymal hematoma is noted in the right high, posterior frontal lobe. There are smaller foci of hemorrhage noted anterior and posterior to this hematoma with another focus of hemorrhage in the right parietal lobe measuring 7 x 9 mm. The intraparenchymal hemorrhages have increased in size when compared to the outside head

What factors influence use of prophylactic seizure medications in patients with intracerebral hemorrhage?

Concepts

- 1 FINDINGS: A 2.1 x 2.6 cm intraparenchymal **Finding** **AnatomicSite** is noted in the right high, posterior frontal lobe.
- 2 There are smaller foci of hemorrhage noted anterior and posterior to this **Finding** **AnatomicSite** with another focus of hemorrhage in the right parietal lobe measuring 7 x 9 mm.
- 3 The intraparenchymal hemorrhages have increased in size when compared to the outside head CT from 11/9/2015.
- 4 There is associated low-attenuation surrounding the hematoma, compatible with **Finding** **Finding** vasogenic edema.
- 5 A more ventral region of low-attenuation is noted in the right frontal lobe (series 4, image 26), which is nonspecific and may represent an area of **Finding** gliosis/encephalomalacia.
- 6 There is no midline shift and the basilar cisterns are preserved.

Concept	Type	Count
right high posterior frontal lobe	Site	1
right parietal lobe	Site	1
hematoma	Finding	3
hemorrhage	Finding	3
vasogenic edema	Finding	1
encephalomalacia	Finding	1
midline shift	Finding	1

Concept Relations

1 FINDINGS: A 2.1 x 2.6 cm intraparenchymal hematoma is noted in the right high, posterior frontal lobe.

2 There are smaller foci of hemorrhage noted anterior and posterior to this hematoma with another focus of hemorrhage in the right parietal lobe measuring 7 x 9 mm.

3 The intraparenchymal hemorrhages have increased in size when compared to the outside head CT from 11/9/2015.

4 There is associated low-attenuation surrounding the hematoma, compatible with vasogenic edema.

5 A more ventral region of low-attenuation is noted in the right frontal lobe (series 4, image 26), which is nonspecific and may represent an area of gliosis/encephalomalacia.

6 There is no midline shift and the basilar cisterns are preserved.

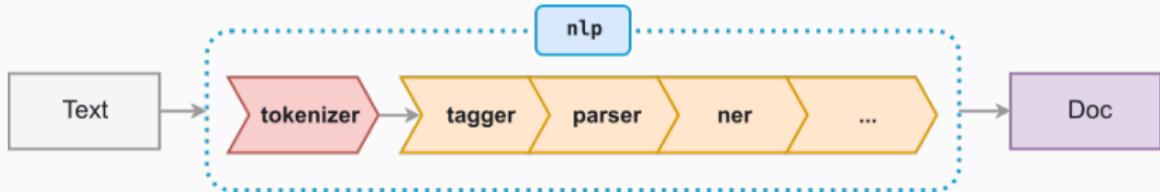

Concept	Type	Status	Site	Size
hematoma	Finding	Asserted	right high posterior	2.1 x 2.6 cm
hemorrhage	Finding	Asserted		
hematoma	Finding	Asserted		
hemorrhage	Finding	Asserted	right parietal lobe	7 x 9 mm
hemorrhage	Finding	Asserted		increased
hematoma	Finding	Asserted		
encephalomalacia	Finding	Possible		
midline shift	Finding	Negated		

Coreference: A bridge too far?

- 1 FINDINGS: A 2.1 x 2.6 cm intraparenchymal hematoma is noted in the right high, posterior frontal lobe.
- 2 There are smaller foci of hemorrhage noted anterior and posterior to this ~~hematoma~~ with another focus of hemorrhage in the right parietal lobe measuring 7 x 9 mm.
- 3 The intraparenchymal hemorrhages have increased in size when compared to the outside head CT from 11/9/2015.
- 4 There is associated low-attenuation surrounding the hematoma, compatible with vasogenic edema.
- 5 A more ventral region of low-attenuation is noted in the right frontal lobe (series 4, image 26), which is nonspecific and may represent an area of gliosis/encephalomalacia.
- 6 There is no midline shift and the basilar cisterns are preserved.
